

xMetrics® USPs

Firm-Controlled Intelligence

xMetrics is the only trading observability platform that enables firms to implement their own analytics logic within a performance-isolated runtime.

Impact

- No vendor roadmap dependency
 - Immediate regulatory adaptation
 - Custom metrics without delay
 - Strategic flexibility in fast-moving markets
-

Topological Freedom

xMetrics can be deployed as a single-machine solution or as a globally distributed architecture.

This enables

- Geographic compliance segmentation
- Latency-aware deployment
- Cost-effective regional instrumentation
- Progressive scaling without redesign

Competitors sell appliances. xMetrics provides composable architecture.

Complete Native Persistence

xMetrics persists all events natively to optimised datastores, eliminating reliance on external analytics stacks

Impact

- Instant historical queries
- No partial visibility
- Lower total cost of ownership
- Faster regulatory and operational response
